

Capturing High Quality Audio on your Android Smart Phone

There are many voice recording apps that will all work just fine. The main features to look for are:

1. the ability to record .wav files
2. the ability to boost the quality of your recording
3. the ability to easily name your files and export them to your email or cloud storage folder

One free app we like: **Voice Recorder**

Once you've installed Voice Recorder, click the settings icon in the bottom right corner of the screen:

Under "Recorder file type" select ".WAV"
Under "Recording Quality," select "MONO – 44 kHz"
