

Capturing High Quality Audio on your iPhone or iPad

There are many voice recording apps that will all work just fine. The main features to look for are:

1. the ability to record .wav files
2. the ability to boost the quality of your recording
3. the ability to easily name your files and export them to your email or cloud storage folder

One free app we like: **Voice Recorder Pro**

<https://itunes.apple.com/us/app/voice-record-pro/id546983235?mt=8>

Once you've installed Voice Record Pro:

1. Hit the red "Rec" button. You'll see two tabs at the top of the screen, "Preset" and "Advanced."
2. Select "Advanced."
3. Hit the plus (+) sign on "Record Format" until you see "WAV (PCM)." That's the one you want.
